

ASSIGNMENT – 05

Q5. List major MQTT client libraries across different programming languages, and list major MQTT broker implementations available in the market; compare their features.

Major client libraries by Language:

- Javascript/Node: MQTT.js is the most popular library for Node.js environments.
- Python: The Eclipse Paho MQTT Python client library is widely used.
- C++: Eclipse Paho offers a C++ client library for embedded and desktop applications.

Major MQTT Broker Implementations:

- EMQX: A highly scalable broker designed for massive IoT connections.
- HiveMQ: Known for enterprise-grade features and broker bridging capabilities.
- Eclipse Mosquito: A lightweight, open-source broker suitable for small devices and development.
- NanoMQ: A lightweight broker specifically design for edge computing cases.

Feature Comparison:

Broker	Primary Strengths	Use cases
EMQX	High Scalability	In Large scale iot platforms
HiveMQ	Enterprise support and bridging Security	Enterprise iot systems
Mosquito	Leight weight and easy to deploy	Edge devices and development
NanoMQ	Very leightweight and fast	Using in edge computing
